LEO DMITRIEV

Product Designer • End-to-End Product Design

ABOUT

Product Designer with 5+ years of experience taking complex, data-heavy products from discovery to production across B2B SaaS, consumer apps, and AI-driven platforms. I specialize in turning complex AI logic into intuitive, trust-building B2C experiences and configurable B2B dashboards, partnering closely with engineering thanks to a hands-on frontend background (React/Next.js). I use research and product metrics to guide design decisions, and prototype rapidly with AI tools to test ideas before build.

EXPERIENCE

Product Designer
AlexFrontEnd, Apr 2024 – Jul 2026

Drove end-to-end product design across key client platforms, leading UX architecture, design systems, and delivery from 0→1 to production.

- **Payment infrastructure (Scorpex):** designed a visual rule-builder for cascading/fallback payment routing and multi-currency wallet flows, replacing a third-party PSP with an in-house system built from scratch
- **CAD tooling (Orkestra):** built a drag-and-drop Ribbon Builder for CAD toolbar configuration, cutting setup time from days to ~15 minutes and eliminating deployment errors
- **Design system:** created a reusable Figma + React starter kit adopted across projects, cutting feature delivery time 2x and bringing dev clarification requests to near-zero
- **Mobile & delivery:** delivered production web and native mobile apps across every engagement on schedule (100% on-time), including KAR — a cross-platform mobile app for a youth dance association that reached 40,000+ active users within six months of launch
- **Team leadership:** led and mentored a design team across concurrent projects — task distribution, design reviews, onboarding, and consistency ownership
- **AI UX:** designed AI-driven interactions (content generation, semantic parsing, intent-based flows), defining full interaction states — input, streaming, error, regenerate

Product Designer
Quidzi Labs, May 2023 – Apr 2024

Owned the comprehensive interface audit and end-to-end product evolution of an active AI-driven collaboration MVP, rebuilding it into a scalable platform.

- **AI interaction model:** moved AI interactions from a parameter-heavy settings form to an intent-driven, one-click flow, cutting task completion time ~50% and lowering the adoption barrier
- **Design system:** built a token-based Figma design system synced to React components, increasing dev throughput 1.5x and minimizing visual QA defects
- **Scope:** redesigned 50+ screens across Smartfiles, Notes, AI search, and collaborative editing
- **Team & stakeholders**: directed a second designer and partnered directly with the founder on product vision, requirement validation, and sprint prioritization

UX/UI Designer
Butalia Media, Oct 2021 – Apr 2023

Partnered with product teams to design core experiences across B2B hospitality booking, AI accounting, AI-powered content tools, and peer-to-peer marketplaces.

- **Product ownership**: sole/lead designer on CHS Reservations (B2B hospitality booking automation) and SharmaTax (AI accounting platform)
- **AI vlog editor**: designed an AI-powered vlog editing tool that auto-cuts and compiles clips, then adds voiceover, subtitles, and metadata — by moving editing and metadata tasks in-app, increased average session duration ~20%

LANGUAGES

English — Fluent (C1)

Russian — Native

SKILLS

Product design

- End-to-end product ownership
- JTBD framework
- User journey mapping (CJM)
- Feature prioritization
- High-fidelity prototyping
- Interaction design

Research & analytics

- User interviews
- Usability testing
- A/B testing
- Data-informed design
- Quantitative funnel analysis

Design systems & technical

- Design systems architecture
- Semantic token architecture
- Components & variants
- Developer handoff optimization
- Visual QA
- WCAG accessibility

Tools & technologies

- Figma (Variables, Dev Mode), FigJam
- React, Next.js, HTML/CSS
- Framer
- Spline, Blender
- Adobe Suite (AE, Photoshop, Illustrator)
- Claude, Gemini / Google AI Studio, NotebookLM, Antigravity, Figma AI, Cursor
- Mixpanel, GA, Hotjar, Mouseflow
- Jira, Linear, GitHub, GitLab, Trello, Slack

FEATURED PRODUCTS

- Scorpex — FinTech payment orchestration
- Orkestra — B2B SaaS, CAD script orchestration

- **Collectibles marketplace:** designed an organizer for collectibles (e.g. sports cards) with rarity-based sorting and item data, connected to a peer-to-peer marketplace for trading with other collectors
- **User journeys:** restructured a KYC flow that dropped a critical eligibility step mid-funnel, reducing form fields and clarifying hints
- **Visual QA:** introduced a Visual QA process (token, spacing, and edge-case audits on staging), cutting UI defect tickets ~40%

UX/UI Designer
Self-Employed, Apr 2015 – Feb 2021

Delivered end-to-end interface and digital solutions for international commercial clients and startups.

- **Product work**: designed an e-commerce platform, a voice-model configuration tool for a US startup, and a collaborative publishing platform connecting writers, reviewers, and publishers
- **Client discovery**: ran client discovery directly, translating business briefs into UI iterations, prototypes, and developer handoff specs

- Quidzi — AI-driven collaboration platform
- KAR — cross-platform mobile app, 40K+ users
- MyVN — hospitality SaaS, vacation rentals
- CHS Reservations — hospitality booking app
